

EVIDENCE HUB™

The AI-powered evidence management solution for HEOR, value and access teams

Future-proof your evidence management with an AI-powered approach

Using Excel, SharePoint and other systems to track and manage evidence is no longer fit for purpose. It leads to problems with version control, data governance and potential loss of important information, as well as delays in sharing the latest evidence across multi-functional teams, in preparation for and during HTA, price and reimbursement negotiations.

Challenges Evidence Hub addresses

Disparate evidence repositories

Finding the right evidence at the right time

Viewing evidence in the context of competitor activity

Static evidence base. Takes significant effort to update and disseminate

Low organisational awareness & visibility of evidence generation

Evidence Hub capabilities

Evidence Hub empowers teams to overcome common challenges and saves hours of manual effort after providing:

- ✓ A structured, centrally hosted repository with built-in governance
- ✓ A catalogue which is easy to search with intuitive filters and natural language enquiry
- ✓ A 'Living' evidence library updated with automatic feeds from PubMed/other sources
- ✓ An overview of evidence generation projects, status and timelines
- ✓ Automated tracking of competitor evidence generation
- ✓ Benchmarking asset's data on outcome measures vs key competitors

"Evidence Hub allows us to seamlessly manage all our publications and has become the one-stop-shop for all evidence management needs within Global HEOR."

Senior Director Global HEOR

There's much more to Evidence Hub.
